The Observer XT 12

What's new!

A PROVEN SOLUTION

The Observer® XT is the professional and user-friendly video coding and analysis software. More than 20,000 professionals around the world are using The Observer XT for advancing their research, testing, and training. With 25 years of experience, we translate your questions into practical and proven solutions and services.

- Code live or from video
- Integrate different data streams such as eye tracking and physiological data
- Visualize events, videos, and physiology in sync
- Calculate statistics and assess reliability
- Present your data in highlight video clips

THE OBSERVER XT 12

The Observer XT software allows you to play back and code videos, visualize and analyze coded activities and actions, and present and report data in an efficient and effective way.

VISUALIZATION & DETAILED CODING

- Jump from your event log to your visualization and back with the push of a button – a fast and easy way to check your coding work by looking at the visualization and going back to the correct events.

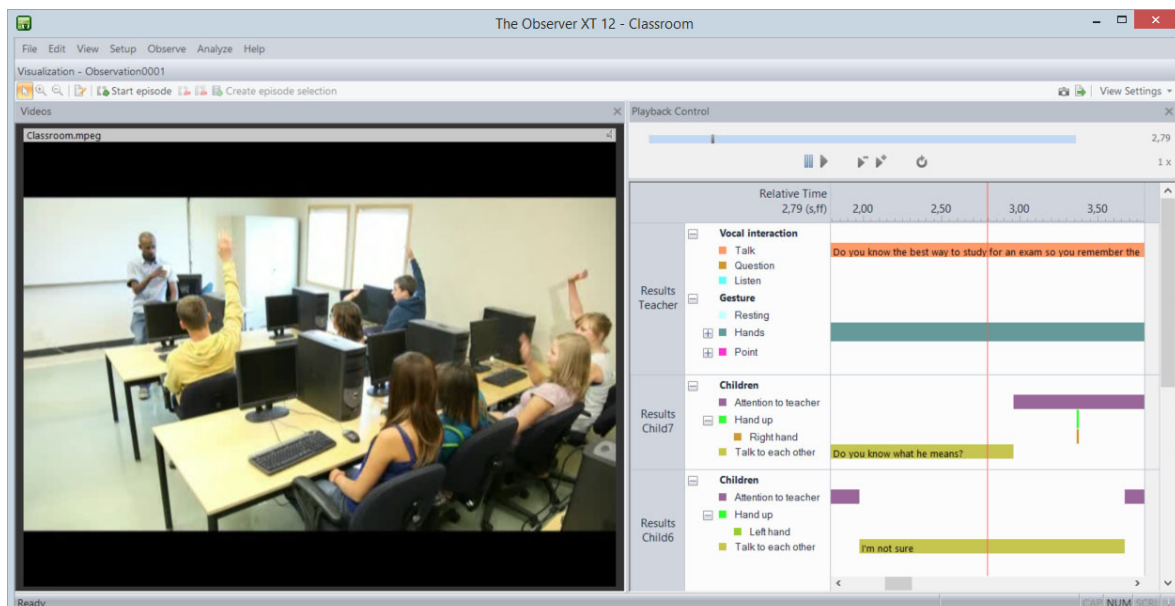

Observe and analyze communication in healthcare. Transcribe medical encounters, record behavior on video, and collect physiological data. With The Observer XT you can easily keep all your data in sync.
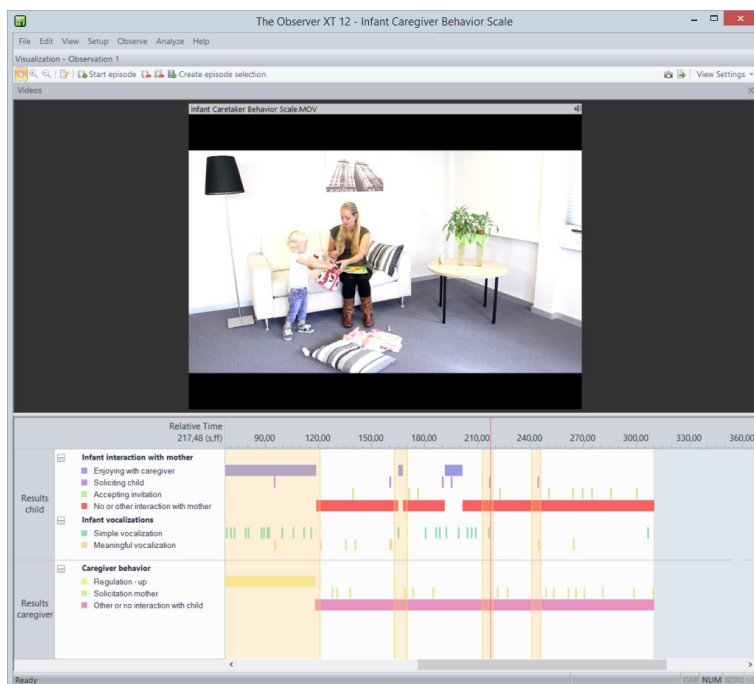

- Visualize comments you entered next to actions or behaviors. You can immediately see what has been said, for example, when you transcribe conversations.
- Set a loop in your video to enable detailed coding of an episode.

CUSTOMIZED TO YOUR NEEDS

- Customize the playback control to select only the buttons you need for your project.
- Easily select segments of your video to make a demonstration video. In the subtitles of the demonstration video, your coding work is shown. Your audience, whether it be trainees or peers, quickly see your results by watching this video segment.

Visualize comments you entered next to actions or behaviors.

Would you like to show your students this part of the video with the associated codes? Easily select the segments by choosing the interesting parts in the visualization.

ANALYZE YOUR DATA

- Find behaviors or comments quickly by pressing CTRL + F when using the software. The Find window now includes a duration column. This column is particularly handy for analysis of the events in other software.

- Analyze not-normally distributed data, which behavioral data often are, with the new statistics Median, 25th percentile and 75th percentile.

CONTACT US

And there is more! Would you like to see this new version and test all the new features? Feel free to contact us for more information and a demo, or request your free trial now online: www.noldus.com/observer. You can also contact us for more information about the software, the software development kit, coding services, (remote) training courses, lab and mobile solutions, and integrated lab solutions including facial expression analysis software, eye trackers, or physiological measurement systems. We are happy to assist you in creating the perfect solution for your research.

FREE 30-DAY TRIAL VERSION

The Observer XT trial version offers you the opportunity to evaluate the software at your convenience. See for yourself how this version can work for you! It is the easiest way of getting to know the new version. Experience the ease-of-use and the new features and functionalities! The trial is now available online - www.noldus.com/observer.

"Refined and accomplished system for coding exquisite human behaviors."

Dr. Gisèle Apter, France
